

A NEW STEERING EXPERIENCE

DEH-NFU6203

DEH-NFU6203 is an electronic steering input unit working without a feedback requirement from rudder. Therefore it is named as NFU Helm. DEH-NFU6203 is a mechatronic solution with integrated electronic control unit, embedded software and CAN bus interface, which can replace the traditional steering column offering a robust steering input function to be fitted in electro-hydraulic steering systems. The solution translates the steering wheel's rotational movement into safe digital information on the CAN bus, offering a resistive steering feedback with redundant control. Engineered to withstand severe operating conditions and tested to fulfill the severe steering input requirements for marine. Please contact to DATA representative or check STEERING GEAR CATALOG p.20 for details.
